

48-port ODF fiber optic patch panel inlet cable method

Overview

Two back cable entrances on the panel can accept cables with a diameter of up to 10 mm. Low bending loss and secure fiber storage are provided by the 35mm bending radius cable spools and 48-core splice trays inside. ODF optical distribution frame unit is used for the termination and distribution of backbone optical cable in the fiber communication system. Welding. Consolidate your fiber optic connections in industrial environments with our DIN rail patch panel, with a modular design and tool-free installation save space and simplify deployment. It serves as the crucial interface between the outside plant fiber cables and the active transmission equipment (like. An optical Distribution Frame (ODF) or patch panel is the starting point for optical cables, most commonly found in rack cabinets in Head End (HE)/Central Office (CO)/Point of Presence (POP)/Data Centre (DC) or smaller cabinets or enclosures. With the rise of high-density data centers and FTTH systems, traditional ODF designs are being complemented by MPO/MTP-based fiber patch panels.
