

850D Optical Module

Overview

They are an ideal replacement for a helium-neon laser in many applications and offer the benefits of superior durability, small size, and a range of wavelengths and powers. Elliptical output beams are produced using a user-adjustable glass focusing lens. Depending on the mode of operation, these devices emit highly concentrated non visible infrared light which can be hazardous to the human eye. Products which incorporate these devices have to follow the safety precautions given in IEC 60825-1 "Safety of laser products". Products are subject to the. Compact LDM Focusable Laser Diode Modules are self-contained and compact and offer a variety of features. All packages contain LDI's high reliability laser chips. The low profile style package is designed for use with narrow high current. LJ series laser diode modules, complete and ready to use, single element aspheric acrylic collimator optic, focusable, supply voltage 3-5 VDC, available wavelengths 635 nm, 650 nm, 780 nm, 808 nm and 850 nm LT series laser diode modules, diverse wavelengths available, complete and ready to use. Optional turn-key bench-top version for CCSI-CW and CCSI-std integrated available with singlemode laser diode (compatible with all options: PMF, Bragg locking etc.
