

AI server h80

Overview

The Gigabyte G492-H80 is an HPC server designed for AI applications and utilizes graphics processing units to accomplish its functions. The G492-H80 notably supports up to 8 x PCIe Gen4 GPGPU cards and is a NVIDIA-Certified system for scalability, functionality, security, and. GIGABYTE servers and Intel Xeon Scalable Processors deliver incredible 1P/2P performance from edge to data center with incredible gains in I/O throughput and workload demands that need high performing CPUs with large, yet optimized, memory configurations. Enhanced I/O: Support for PCIe 4.0 allows. Built for large AI training, tuning and inferencing workloads with 8-GPU configurations that deliver the right combination of performance and scalability. Flexibility to align. From cost-effective single-GPU servers and performance-optimised models with four and eight GPUs to the most powerful professional AI computing solution on the market – NVIDIA DGX.0 technology and memory speeds of up to 3200MHz, depending on the type of DDR4 memory modules installed. At 4U, the system is capable of supporting up to 8x full-height, full-length PCIe. This 7U dual-socket server is powered by 5th Gen Intel Xeon® Scalable Processors and eight NVIDIA H100/H200 Tensor Core GPUs.
