

Advantages of JXF Distribution Box

Overview

The product uses zinc alloy AB lock, 180° free opening door, and foam sealing strip, and has the advantages of reasonable structural design, safe circuit configuration, and good protection properties. Note: Customized according to the user requirements. JXF Series Power Distribution Box product is box assembled with various control functions by customer-selected components, and there are many box sizes and specifications and the size of the box can be customized according to the size of the installation elements. With advancements in technology, this control box integrates various features that enhance operational efficiency and adaptability. The main applications of JXF. A key advantage of plastic enclosures is their inherent resistance to corrosion—unlike metal, they do not rust when exposed to rain, humidity, or salt-laden air. This makes them ideal for coastal installations or humid climates. Additionally, their non-conductive nature enhances electrical safety. The JXF distribution box is suitable for 50Hz, 500V and below three-phase three-wire, three-phase four-wire, and three-phase five-wire systems with load currents not exceeding 250A.
