

Broadband optical fiber is the same as fiber optic cable

Overview

"Broadband" refers to high-speed internet via various technologies, including DSL, cable, and fiber. Fiber is the decision most enterprises face when upgrading connectivity. General broadband uses DSL, cable, or satellite delivered over copper or coaxial networks. Fiber optic internet is a much more advanced type of broadband that moves data as light, which is a polite way of saying. The key difference between broadband and fiber lies in their underlying transmission medium and resulting performance, with fiber optic vs broadband showing clear advantages in speed, latency, and future-proofing. However, costs, availability, and necessary equipment can tilt the balance depending. Fiber optic broadband literally uses fiber optic cables to send data.
