

Cable trays offer high cost-performance

Overview

Cable trays are a cost-effective solution for managing electrical wiring. Less material is required, lowering overall project expenses. This article sets out a direct, data-backed comparison of FRP and GRP cable trays against hot-dip galvanised steel, drawing on independent research and published lifecycle cost modelling, to help engineers and procurement teams make a more informed specification decision. This article highlights. Aluminum wireways cost \$8-15 per linear foot vs steel at \$3-8 per foot Installation adds \$12-25 per linear foot depending on complexity and mounting method Total project costs range from \$15-40 per linear foot including materials and labor Surface-mounted systems cost 20-30% less than suspended. Cable trays have become a preferred option in industries because of their convenience and cost-saving advantages.
