

Cable trays with bottom openings

Overview

The bottom part of the perforated cable tray has openings, which provide ventilation and prevent overheating. It has about 60 % flat area which supports the cables laid within the longitudinal side rails. aluminium or steel with a range of finishes. Straight sections can be ordered in a variety of lengths and bottom styles, and are accompanied by an extensive selection of fittings, covers and accessories r risk of exposure to live, energized parts. Each cable tray type performs a different function and comes in various materials such as aluminum. Our cable tray systems securely hold and protect cables and come in many models and sizes, solid bottom and ventilated. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. The solid bottom can help reduce electromagnetic interference (EMI). Adding a lid makes it even more protective.
