

Cameroon Fiber Optic Cable Construction

Overview

Incumbent operator CAMTEL will kick off the rollout of an additional 3,500 kilometers of terrestrial fiber across Cameroon in 2024. The plan was announced by Judith Yah Sunday, CAMTEL's CEO, in her opening address at Digital Week Cameroon, in Yaounde, earlier today. While submarine communications cables are used to connect countries and continents to the Internet, terrestrial fibre optic cables are used to extend this connectivity to landlocked countries or to urban centers within a country. Cameroon has long been presented as a hub in terms of telecom infrastructure in the Central African sub-region. The country is connected to five optical fiber submarine cables (SAT3, WACS, ACE, SAIL, and NCSCS). Yet it makes very little use of this equipment to develop its telecoms sector, as well. On March 6, 2026, President Paul Biya signed a decree authorizing a loan of 108. It aims to complement the 12,000. As a provider of a total optical communication solution that leads to success in customers' new network building project, we take care of and accomplish the entire process of the project from the initial design and consulting, engineering and building, management and maintenance, and to even. It is within this framework that the installation of optical fibre throughout the national territory is carried out.
