

Can FC optical modules be used on switches

Overview

Fibre Channel transceivers, also called FC optical modules, are specialized devices designed for high-speed, reliable, and lossless data transmission within SANs. They act as the interface between Fibre Channel switches, host bus adapters (HBAs), storage arrays, and fiber optic. Fiber Channel technology (Fibre Channel) is a network storage switching technology that can provide long-distance and high bandwidth, and can realize the transmission of large data files between storage, server and client nodes. Fiber Channel (FC) is a high-speed network interconnection technology. Will the modules be compatible and operate flawlessly on my switches?

This article will lead you to figure out the interoperability and compatibility nature of the optical transceivers. FC. We offer a large range of LXI Ethernet and PXI & PXIe optical switching solutions which include 1x2, 2x2, 1x4 and 1x8 configurations, and our switch modules are available with a wide choice of connectors, including FC/APC, FC/PC, SC/PC, MU (Mini SI) and LC. We offer a choice of either MEMS (Micro.
