

Converting a non-PoE switch to PoE

Overview

PoE doesn't carry through additional switches/hubs, it will only be supplied to devices that are directly connected to a PoE switch (and only by request). If you have a PoE switch, and want to pass PoE to client devices, you should not use non-PoE switches in. Generally, no. PoE removes the need for separate power cables and simplifies the installation and deployment of network devices. And what happens if you accidentally plug in a normal (non-PoE) device into a PoE switch?

I explore all this – and more – in this video. including via a VERY suspect looking demo! I combined TWO power over Ethernet switches with three non-PoE devices (a HP printer, DVD player and TP-Link Gigabit). The PoE injector is a network device that enables the non-PoE devices like regular network switches to work with the PoE-compatible devices by injecting the PoE capabilities into the legacy network system. It offers a cost-effective solution to inject vitality into the old network system since the. A PoE switch is a regular network switch that has Power over Ethernet functionality integrated.
