

Distribution Network Automation Communication Requirements

Overview

The two proven and optimal communication technologies for application-specific needs are Synchro-nous Digital Hierarchy (SDH) and Multi-Protocol Label Switching (MPLS) solutions. Fiber-optic cables are used whenever it is cost-efficient. 50The handbook describes various power distribution system constructions and elements there-of, technical considerations, distribution automation infrastructure and functionality, communication aspects, special automation applications and life cycle aspects. It also reveals some trends and future. Distribution networks have traditionally had low levels of automation and control, primarily centered around the use of SCADA to monitor medium voltage (MV) feeders together with a lower usage of distribution management, voltage control, and automatic reconfiguration systems. While Distribution Automation can improve efficiency, cost and speed of many.
