

Distribution box debugging wires

Overview

Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum. Actual units use PNP status indicator, NPN status indicator, or neither. Dimensions are shown in mm (in. 81 ft)]. The debugging of the power distribution cabinet is mainly divided into two major systems, one is the lighting system debugging and the other is the debugging of the electric power system. The two debugging steps and processes are different. In order to help you further clarify the debugging method. Electrical debugging of distribution box/cabinet after installation is the key link to ensure the safe operation of equipment, which should strictly follow the specifications and focus on safety protection, function verification and parameter calibration.
