

Does drop fiber optic cable require a terminal box

Overview

Drop optical cables can be without connectors or with optical connectors on one or both ends (pre-terminated or “plug & play” solution). All of these cables are characterized by small dimensions, light weight, high flexibility, simple structure, easy installation, etc. A Fiber Drop Cable Protection Box is a small, weatherproof enclosure designed to protect the fiber optic drop cable connection—typically the point where the outdoor cable meets the indoor wiring or subscriber terminal. We can divide them into two. An MST Fiber Terminal — also called a fiber terminal box, MST fiber enclosure, or Fiber Terminal (Hardened) — is a compact outdoor distribution unit that connects the feeder cable to multiple drop cables leading to end users. A typical PON topology (GPON, XGS-PON, or 25G PON) flows OLT → fiber distribution hub → passive splitters → distribution/drop fibers → premises.
