

Does outdoor optical cable need to be run through a conduit when laid indoors

Overview

Indoor fiber optic cable uses tighter buffers and routes through conduits or trays. You install indoor cables in. Underground fiber cables are generally pulled within a conduit that is buried underground, usually 1 to 2 meters deep, to reduce the possibility of being dug up. Lubricants are added to the outdoor cable design to reduce friction on high-pulling tension. NBN guy came out to install fibre but said i need to provide space in the roof space for him to work due to the current conduit from the node being in an. I am hoping to run a fibre optic cable from the office/study to the "server" room where I'll have my NAS. Use proper tools, wear safety gear, and follow strict safety and environmental protection steps to keep your team safe and your network secure.
