

Dpx Core Switch

Overview

□The DPX17000 Series is designed with a cutting-edge CLOS architecture, separated control plane and forwarding plane, and relatively independent master control engine and switch boards. In this way, it helps greatly improve device reliability while laying a foundation for. The DP-31030 is a 6 position dpx™ CANBUS switch panel with dual color (red/white) backlight. The switch panel has removable legends, backlight control, system status LEDs and a DEUTSCH connector for easy wiring connection. In addition to IPv4/IPv6, MPLS VPN, loopfree and other network features, its deep service wire-speed processing capabilities include iNAC, application. data transmission capacity has grown exponentially. According to Gilder's law, the bandwidth will double every six months in the next 25 years. Such rapidly growing data services will not only make the network architecture very complex, but also face enormous challenges such as network security. requirements of tertiary and industrial installations. ELECTRICAL AND MECHANICAL CHARACTERISTICS 8. CURVESth in the transmission capacity of network data.
