

Electronic transmission line optical cable ground wire

Overview

OPGW (Optical Ground Wire) is a kind of cable that comprises the dual functions of grounding and fiber optic communication. It is increasingly utilized in high-voltage transmission lines as a functional element that both safeguards the power system and allows data sharing across the. An optical ground wire (also known as an OPGW or, in the IEEE standard, an optical fiber composite overhead ground wire) is a type of cable that is used in overhead power lines. By intercepting lightning strikes before they can reach. OPGW stands for Optical Ground Wire. It's a specialized cable used in power transmission lines that combines two crucial functions: Electrical grounding: It acts as a shield wire at the top of transmission towers, protecting the system from lightning strikes by safely channeling electrical surges. OPGW is primarily used by the electric utility industry, placed in the secure topmost position of the transmission line where it "shields" the all-important conductors from lightning while providing a telecommunications path for internal as well as third party communications.
