

# European Optical Cable Network

## Overview

We own and operate 18 dense fibre based metropolitan city networks in Western Europe. See how we've developed our network, explore the footprint and connected buildings and find out what's. This visualization shows the growth of the undersea cable network, global internet peering capacity, and the distribution of IP addresses via BGP announcements over time. Use the controls at the top to play the animation or step through year by year. For more details and insights, please read this. High-quality, energy efficient optical fibre telecommunication networks will be the backbone infrastructure to enable the digitalisation our lives, working environments, services and operations. Whatever forms the digitalisation will take and whatever technologies it may be using, a strong, robust. It consists of an interactive online mapping application that aggregates and visualizes various dimensions of quality of service (QoS) delivered by broadband networks (fixed and mobile) in the European Union. The region has become a global hub for sustainable cabling and ultra-high-density urban fiber.
