

# Fiber Optic Cable Maintenance Checklist

## Overview

Monthly Maintenance: Randomly inspect fiber optic cable connections, test backbone fiber optic link attenuation, and clean connector end faces. Small oil micro-deposits and dust particles on fiber optic cable optical surfaces may cause a loss of light or degraded signal power which may ultimately cause intermittent problems in the optical connection. Check fibers in splice closures to ensure they are stress free. Ensure that all cables are in operating environments that are within their specifications - both heat and cold can cause problems. This is the latest revision of a Recommendation that was first published in 1996. This includes copper wiring of the CAT5 and CAT6 standards, fiber optic cables, voice/data installations, low-voltage systems, and their. Keeping your fiber network performing at its best isn't just about how you build it, it's how you maintain it. **CLEAN BEFORE YOU CONNECT** Always clean connector end-faces before.
