Fiber Optic Cable Tapping Survey Instrument

Overview

Test equipment can simply put a bend in the fiber and extract sufficient light to identify a fiber or determine if a signal is present.OverviewFiber tapping is a method that extracts signal from an without breaking the connection. Tapping of optical fiber entails diverting some of the signal being transmitted in the core of the fiber into anothe. Surreptitious fiber tapping may be used for surveillance, particularly in jurisdictions where specific authorities are legally granted access (usually limited or conditional) to electronic equipment used in One way to detect fiber tapping is by noting increased added at the point of tapping. Some systems can detect sudden attenuation on a fiber link and will automatically raise an alarm. There are, however, ta.
