

Fiber Optic Cable Traction Machine Pulling Force

Overview

This cable pulling force calculator estimates the required pulling force based on cable weight, route length, friction coefficient, duct bends, and drum usage. The calculation provides a theoretical value and should be used as a guideline only. Always select a cable pulling machine with sufficient. Cable pulling tension is the main parameter to be evaluated when assessing any cable installation, and knowledge of the pulling tension is essential to plan the cable laying and to assess the suitability of the cable design, route design, and installation methodologies. Typical values range from 600 pounds (2700 Newtons) for standard outside plant dielectric cables to shorter ranges for indoor cables. Never estimate. Every fiber optic cable has a specific maximum pulling tension rating, usually measured in Newtons (N) or pounds-force (lbf). For instance, a typical indoor distribution cable might have a rating of 270 N (60 lbf), while a heavy-duty. This instruction manual is a step-by-step guide for end and termination of tight-buffered cable, including sheath removal, core preparation, and fiber preparation.
