

Fiber Optic Connector and Measurement Experiment

Overview

In this video, we demonstrate the practical experiment on *Measurement of Bending Loss, Connector Loss, and Attenuation Loss in Optical Fiber* using the **Fiber Optic Trainer Kit**. as a benefit to those interested in teaching, designing, manufacturing, selling, installing or using fiber optic communications systems or networks. It is intended to be used as a overview and/or basic guidelines and in no way should. FOA has an OTDR Simulator that runs on a Windows PC and allows the user to view and measure OTDR traces. This link has information on downloading and using the FOA OTDR Simulator: <https://foa.org/tech/ref/testing/OTDR/OTDRsimulator>. Also located on the main panels are the optical transmitter connector and the receiver connector, to which the polymer optical fibre (1 mm diame-ter) can be. This manual contains ten laboratory experiments to be performed by students taking the optical fiber communication course (EE 420).
