

Fiber Optic Sensor Geotextile

SC connector  X 12

Overview

This monitoring solution embodies fiber optics on a geotextile fabric, e. a textile used into the soil, and combines the benefits of geotextile materials, such as high interface friction in contact with the soil, with the latest fiber optics sensing technologies. The current study investigates the feasibility and performance of Fiber Bragg Grating (FBG) optical sensors in geotechnical engineering applications, aiming to demonstrate their broader applicability across different scales, from controlled laboratory experiments to real-world field. A new sensing solution based on the combination of a technical geotextile and fibre optics measurement technologies has been developed for strain and temperature measurement in pavement. This additional reliability and integrity can assure the appropriate performance of a geo-structure - leading to better land use, longer la nted TenCate GeoDetect® system starts.
