

Fiber optic cable tubing removal

Overview

Goal is to open cable and expose the fibers for splicing or termination without harming them. Bend the cable more sharply than the minimum recommended bend radius. Doing so may cause damage that can alter the transmission directly into the end of a fiber that may be carrying the eye will not. These fiber buffer stripping tools provide a quick, easy, and reliable way to remove the buffer from an optical fiber in preparation for connectorization. A fiber guide and matched blades ensure that the optical fiber is correctly positioned and stripped each time. A recent evergreen technical brief from Panduit comprises a step-by-step guide for setting up end and midspan access of loose tube optical cable, including best. Stripping and preparing fibre optic cables for termination is a critical step in the installation and maintenance of fibre optic networks. Fix the cable to the pulling rope / tape using a specially designed pulling grip for optical fibre cable (length of 600mm minimum) to ensure that the pulling tension is well distributed on all cable components (outer sheath and reinforcing elements). Before termination, approximately 3m of cable.
