

Fiber optic composite low-voltage optical cable refers to

Overview

Optical fiber composite low-voltage cable (OPLC) is a cable stranded together with insulated wire and fiber optic unit which have both functions of power transmission and optical communication. The cable is used for power engineering less than 1KV. Power Fiber to the home (PFTTH) is concept of. Optical fiber composite insulated power cable for low voltages (OPLC) is a new type of photoelectric composite cable for low voltage power lines, and has double functions as ordinary low voltage cable and communication cable. The structure of OPLC integrates the fiber and copper wire of. The two varieties of hybrid or composite fiber optic cable are those that combine electrical conductors with fiber optic cables under a single jacket and those that contain multimode and single-mode under a single jacket. the largest angle that a light ray can enter a fiber and still propagate down.
