

Function of Relay Protection Merging Unit

Overview

Merging units are a key element of the process bus concept, enabling the digitization of analogue, binary and command information into the IEC 61850 format so that end-to-end digitization can be achieved, contributing to a full digital substation. MU360 is the Process Interface Unit (PIU) with. Mega trends, such as digitalization and integration of renewables, are driving power systems to the next level. Is the next innovation a digital substation completely without wires?

Or is it a substation with only basic measurement products, while the protection and control algorithms are computed. SIPROTEC 6MU85 merging unit offers versatile solutions and migration concepts for new and existing systems. Compliant to IEC 61869-9, IEC 61869-13 and IEC 61850-9-2. Contact us for sales and pricing information.
