

# Galvanized cable trays come in several colors and have different prices

## Overview

Cable tray pricing depends on materials, coatings, size, supplier margins, and order quantity —plus hidden costs like shipping and installation. The trays are available in a range of colors and styles, allowing them to blend in seamlessly with the building's design. When it is used outside, the red rust will tend to be visible after a period of 6 to 12 months. This is the bracket-to-bracket distance. Our range of products include hot dip galvanized cable trays, perforated cable trays, gi pct cable tray, stainless steel ladder cable tray, pre galvanized cable trays and powder coated perforated cable tray. The galvanization process—coating steel with a protective layer of zinc—enhances corrosion. Heavy duty cable trays and cable ladders are manufactured from pre-galvanized or hot-dipped galvanized sheet metal, designed to meet ideal environmental working conditions for indoor and outdoor use in commercial or industrial environments with high cable density.
