

Grounding Standards for Indoor Distribution Boxes

Overview

Standards IEC 30129 and AS 30129 Telecommunications Bonding Networks for Buildings and Other Structures and Standard TIA607-E Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises provide guidance on the design and installation of the indoor grounding. Standards IEC 30129 and AS 30129 Telecommunications Bonding Networks for Buildings and Other Structures and Standard TIA607-E Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises provide guidance on the design and installation of the indoor grounding. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical insights into proper grounding techniques, with a special focus on how selecting quality materials from a reliable building material supplier impacts your entire system's safety and longevity. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system. During fault. This Grounding Standard describes the technical requirements for grounding the SEC Distribution Network installations. SEC Distribution System extends from the MV (33 kV, 13.8 kV) feeder outlets of HV / MV Substations down to SEC Customer interface including KWH-Meters and meter boxes. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used.
