

Gulf Region Optical Network Switch 800G

Overview

This standardized solution for 800G ZR pluggable modules, powered by coherent DSP technology, allows data centers to achieve unprecedented data transmission speeds over distances up to 120 kilometers, eliminating the need for costly and complex DWDM systems. Cisco® QSFP-DD and OSFP 800G ZR/ZR+ coherent optics modules enable 800G traffic over. Qualified for use across Juniper's 800GbE-capable PTX and QFX product families, Juniper offers an expanding portfolio of 800G optical transceivers in both QSFP-DD800 and OSFP800 formfactors. This optics series is designed to address rapidly expanding 800GbE routing and switching solutions. Use. 800G Telecom ZR+, High Tx output power (0dBm), L-band 5THz tunable, 0°C to 70°C, LC receptacle 800G Digital Coherent Optics (DCO) transceivers are available to support various Dense Wavelength Division Multiplexing (DWDM) applications including Data Center Interconnect (DCI) up to 120km fiber. The Optical Internetworking Forum (OIF) started the 400ZR project in 2016 to standardize interoperable coherent interfaces with power consumption/dissipation to support small form-factors, such as QSFP-DD and OSFP, to plug into routers. Targeting a module power consumption/dissipation of 15 Watts. Delivering up to 800 Gbps of bandwidth, Orion provides the performance that will effectively allow coherent pluggable modules to be used across most—if not all—optical spans in today's telecommunications networks. Orion-based modules will also provide data centers the much-needed bandwidth boost. The initial wave of switches featuring 800G ports has entered the market, facilitating a comprehensive evaluation of opportunities and strategic deployment planning by service providers.
