

High-precision DC power distribution unit for US emergency communication cabinets

Overview

Developed by Tedeg Defence, the DC Power Distribution Unit is a power management device that collects energy from various DC power sources and distributes it to systems. Manufactured to military standards, this product offers high reliability and efficiency. The Liebert® RXV remote power distribution cabinet provides dense power distribution in a small footprint, with up to 400 Amp inputs and 84 poles in a single 24"x12" panelboard. This unit features advanced monitoring and control capabilities that ensure precise allocation of power to connected equipment. These PDUs are typically used in large data centers for both raised and non-raised floor applications, where they receive incoming power and distribute it to individual racks or groups. The Power Distribution Unit (PDU) delivers a superior approach to power distribution, incorporating advanced safety mechanisms, seamless remote communication, meticulous output monitoring, and precise control functionalities. The space-saving PDU is easy to move and adapt to the future demands of the data center.
