

How to ground a fire protection distribution box

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be $< 1 \Omega$. Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical. The EGFCP helps operate devices such as circuit breakers and fuses or ground-fault detectors in ungrounded systems. Why is it so important to ensure you have proper grounding and bonding for your electrical system?

First and foremost is the safety of personnel within a building.
