

How to record user fiber optic cable test results

Overview

Standards require capturing test results, including individual measurements from the tester, and storing them in a format suitable for generating reports. Test documentation should also include. ic system. Fiber optic testing of a newly installed system not only verifies that the system meets its design requirements, but also creates a performance baseline for all future testing and troubleshooting of t at system. Corning recommends that all fiber optic systems be tested to a minimum set. FiberTrace 2 and FiberCable 2 post-processing PC software tools are designed for installers, network operators, and service providers willing to edit and analyze optical fiber test results offline as well as generate accurate and updated documentation. These test procedures assess the physical and functional qualities of fiber optic cables, connectors, and the network as a whole.
