

How to simulate a COMSOL fiber optic sensor

Overview

In this video, we demonstrate a step-by-step simulation of Single Mode Optical Fiber using COMSOL Multiphysics. You'll learn how to model the fiber structure, set up boundary conditions, select appropriate physics (like Electromagnetic Waves, Frequency Domain), and. The transmission speed of optical waveguides is superior to microwave waveguides because optical devices have a much higher operating frequency than microwaves, enabling a far higher bandwidth. We also learn about COMSOL's 'Parametric Sweep' technique to vary the bending radius over a range and study how the different values of bending radius affect the modes. We. In this second video of the PCF-based SPR sensor series, we explain how to start COMSOL Multiphysics and build the complete geometry of a Photonic Crystal Fiber (PCF) based Surface Plasmon Resonance (SPR) sensor. The main purpose of the presented numerical modelling results is developing a simple.
