

# Indoor cable trenches and cable trays

## Overview

Cable trays are above-ground systems that support and organize cables. The biggest difference is how they're installed—trays are exposed, trenches are buried. Understanding the types of cable containment systems, including trays, trunks, and conduits, helps engineers and contractors select the best. In modern electrical and telecommunications installations, effective cable management is essential for ensuring the safety, reliability, and longevity of wiring systems. Proper cable management not only reduces risks such as overheating, physical damage, and wear but also enhances the overall. Cable troughs are convenient systems for providing safe, secure and practical management of electrical cables, pipes and other service utilities. They can act as a permanent or temporary routing solution for applications where cables need to be quickly adapted.
