

Industrial-grade optical module

Overview

Supporting 10km over single-mode fiber with 4 LAN WDM wavelengths and extended -40 to 85°C temperature range, this module delivers 6. LC/UPC duplex for outdoor and industrial deployments. Industrial grade components are essential in environments where standard grade electronics simply can't survive. From rugged terrains to vibration heavy operations, these applications demand transceivers and systems built to endure harsh conditions without compromising performance. E-Temp ranges from -20°C to +85°C. In addition, industrial optical. This guide delves into the distinctions between Commercial (COM), Extended (EXT), and Industrial (IND) temperature ranges, highlighting their applications and providing examples from LINK-PP's product lineup. Why Operating Temperature Matters Operating outside their specified temperature range. Optical modules can be categorized into commercial grade (0°C to 70°C), extended grade (-20°C to 85°C), and industrial grade (-40°C to 85°C) according to the different operating temperature ranges.
