

Intelligent Optical Cable Terminal Box for Rail Transit

Overview

The 16 Cores Optical Fiber Terminal Box emerges as a solution designed to meet the stringent requirements of rail communication systems. Rail networks require real-time monitoring to ensure the safe and on-time operation of trains. NORDEN Fibre optic DIN rail mounted terminal box is available for the distribution and terminal connection for various kinds of optical fibre system, especially suitable for mini-network terminal distribution, in which the optical cables, patch cords or pigtails are connected. In the world of rail transportation, communication is more than just a convenience—it's a critical component that influences safety. The DIN rail terminal box is mainly used for connection and storage between optical fiber and cable and equipment pigtail, which can meet the customer's use in the case that the rack terminal box and the wall mounted terminal box cannot open up additional space. Optical fiber is resistant to EMI, vibration, moisture, and temperature, making it resilient in harsh environments. Smart urban rail based on innovative applications such as cloud, big data and the internet of things (IoT) has become the industry trend, greatly improving the efficiency of transportation and improving the travel. Among other things, the RailCon program supports the European Future Railway Mobile Communication System (FRMCS), an important foundation for the further digitalization of rail transport in the coming decades.
