

Interface st-412

Overview

The ST-412 interface and its variants were the de facto industry standard for personal computer hard disks until the advent and wider adoption of the IDE or ATA interface in the early 1990s. Overview The ST-506 and ST-412 (sometimes written ST506 and ST412) were early introduced by in. The ST-506 HDD was the first 5.25 inch, introduced in 1980 by Shugart Technology (now). It stored up to 5 megabytes after formatting (153 cylinders, 4 heads, 32 sectors/trac. In the ST-506 interface, the drive connects to a controller card with two ribbon cables carrying signals, while a third cable provides power. The two signal cables are the wide 34-pin control cable and the narrow 20-. Many other companies quickly introduced drives using the same connectors and signals, creating a hard drive standard based on the ST-506. chose to use it, acquiring adapter cards for the from and.
