

Introduction to Intelligent Electronic Patch Panels for Networks

Overview

An intelligent patching system is the electronic link between the network's physical layer and the cabling records. This complete & intelligent-ready physical layer management system uses RFID technology for wireless detection of individual patch cords & real-time monitoring of unintended physical changes in network infrastructure. Belden offers a variety of software solutions. The software helps with managing. A PCU (Panel Control Unit) is equipped at the front of the patch panels and scans the area in front of each port. The second side of the patch cord has the same cable ID and when the. As networks scale to accommodate growing digital demands, Intelligent Patching —a key component of Automated Infrastructure Management (AIM) —is transforming how physical layer connectivity is monitored, managed, and maintained. At ACCL we have deployed IIM in head-end data centres, trading floors and university campuses.
