

Introduction to Types of Galvanized Cable Trays

Overview

Galvanized Cable trays made by JLH Electric can be divided into pre-galvanized cable trays, GI cable trays and HDG cable trays, according to surface treatment process; They can also be divided into galvanized cable trays, galvanized cable trunking and perforated. Galvanized Cable trays made by JLH Electric can be divided into pre-galvanized cable trays, GI cable trays and HDG cable trays, according to surface treatment process; They can also be divided into galvanized cable trays, galvanized cable trunking and perforated. A galvanized cable tray is a metal pathway system used to support, protect, and route electrical cables within a building or facility. Galvanized cable trays are used to support and organize cables in various installations, such as commercial buildings, industrial facilities, and data centers. ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require additional protec eferred to support and protect numerous small. The primary distinction lies in the area of use of the metal. Dry indoor rooms should use pre-galvanized (PG) steel. Most cable tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminium alloy) or from a metal with a corrosion-resistant finish (zinc or epoxy).
