

Large connector optical module

Overview

Leveraging LPO technology, the module provides ultra-low-latency, power-efficient optical links tailored for AI, high-performance computing, and hyperscale data center applications. Innovative expanded beam connector options integrate 12, 16 or 144 fibers into a single connector. While the industry-standard OSFP (Octal Small Form-Factor Pluggable) module has successfully enabled 400Gbps, 800Gbps, and 1.6Tbps optical pluggable modules, it is limited to 32 modules per Rack Unit (RU), typically requiring 2 RUs to achieve 102.8Tbps of switching. F5 only provides support for F5-branded or F5-provided copper transceiver and/or optical transceiver modules. The below transceiver specifications are subject to change without notification. Targeting high-reliability interconnects where high data rate communication links, low size, weight, and power (SWaP) as well as radiation resistance performance are required. Suitable for harsh environments and designed for demanding applications where reliability and high performance are required, our NADDOD provides high-performance 800G OSFP LPO optical module, which are very suitable for AIDC deployments.
