

# Luna Fiber Optic Sensing

## Overview

Luna is an international leader in fiber optic test applications, with award-winning research in high resolution OBR, distributed fiber optic sensing, and terahertz measuring technologies. Fiber optic sensors enable accurate and dependable structural health monitoring systems that can span all sizes of structures and capture both static and dynamic phenomenon. Luna's monitoring system instrumentation includes optical interrogators, long-gage strain sensors, accelerometers. Our distributed sensing solutions offer high-resolution strain and temperature measurements using low-cost optical fiber as the sensor, providing unprecedented sensor density for your strain or temperature sensing application. Globally, due to customer satisfaction and capacity to. The Luna Innovations FiberPro 2 Fiber Optic Measurement System is a fiber optic sensing system and signal-conditioning unit. Throughout the tests, the pipe continued.
