

Network pricing for optical splitters

Overview

Modern PLC splitters typically range from \$20 to \$200, with pricing primarily influenced by the splitting ratio (1:2, 1:4, 1:8, 1:16, 1:32, or 1:64), insertion loss specifications, and manufacturing quality. In passive optical networks (PONs), optical splitters are essential for distributing signals from a central optical line terminal (OLT) to multiple optical network units (ONUs), enabling efficient fiber-to-the-home (FTTH), fiber-to-the-building (FTTB), and enterprise broadband deployments. In this guide, you'll learn how fiber splitters function in PON networks, the difference between PLC and FBT types, and how to choose the best. Global Optical Fiber Splitters Market Size By Type of Optical Fiber Splitters (Fused Biconical Taper Splitters (FBT), Planar Lightwave Circuit (PLC) Splitters), By Application (Telecommunication, Data Center Connectivity), By Fiber Type (Single-Mode Fiber (SMF), Multi-Mode Fiber (MMF)), By Number. Fiber optic splitters offer a cost-effective, practical solution by dividing a single fiber line into multiple outputs.
