

Optical cables in OLT

Overview

An OLT interfaces with the Metro Ethernet Network or backbone internet, receiving high-speed data which it then transmits to multiple Optical Network Terminals (ONTs) via fiber optic cables. A single OLT may connect up to 128 users (e., 4 PON ports x 32 users per port). An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. It provides two main functions: to perform conversion between the electrical signals used by the service provider's equipment and the. In the age of fiber-to-the-home (FTTH) and ultra-broadband connectivity, the Optical Line Terminal - or OLT - is one of the most crucial devices powering our high-speed digital world. In this guide, we'll demystify what an.
