

Optical transceiver indicator light

Overview

The fiber optic transceiver has six LED indicators, which show the working status of the transceiver. According to the leds, we can determine whether the transceiver is working properly and what problems may occur, thus helping to find out the fault.

FDX: Lights up to indicate that the. Today, let's take a look at the functions of the six indicator lights on a Gigabit fiber optic transceiver.

Top Two Lights: Indicate Gigabit and Fast Ethernet modes. With the fiber media converter, it also provides a cheap solution for users who need to upgrade the system from copper wire to. When the power is on and the connection is correct, the corresponding LED indicator will illuminate.

Indicator Light On: The optical port is operating in 1000M mode Off: The optical port is operating in 100M mode.

Steady on: The fiber link is connected correctly. Their functions and fault determination are.
