

Outdoor machine room battery float charging and equalization charging

Overview

Battery equalization is the use of constant current charging, charging fast, short duration; Floating charge is the constant voltage charge of the battery, which lasts a long time and charges slowly. The charging of the battery is generally divided into two kinds of balanced charging and floating charging. Equal charge: In order to compensate for the uneven voltage generated by the battery in the. Battery float charging is a smart charging technique that maintains a battery at full capacity without overcharging it. This is the stage in which the charger identifies. I am using 580w x 18 Jinko Bifacial Panles, with 8KW Inverex Nitrox Hybrid Inverter and a Lithium Battery ESM-48100B1. I have 2 ACs running on smart load. As soon girl is offline, it switches to battery and battery volts right away drop from 54.
