

Overflow in the distribution box

Overview

The leak or overflow in your d-box may be because of the drain field's groundwater saturation, backing up of the water out into the d-box lid, and drain field flooding. When drainage blockage causes the d-box to overflow, simply sealing its lid or cover is not enough. When it fails, symptoms include uneven wet spots in the yard, slow indoor drains, and sewage odors. One of the main things that you have to know about your septic system is the location of your distribution box or. Find out the crucial key to solving septic tank distribution box problems for optimal system performance - don't miss this essential guide! Understanding septic tank distribution box problems is essential for peak system performance. When this critical component becomes blocked, wastewater may back up into the home, flood the drainfield, or contaminate surrounding soil and. The resulting effluent from the tank is then released into a distribution box which further distributes it to a drain field. All parts of a septic system should work optimally. If the D-box is leaking, smells, or is tipped, clogged, or otherwise not working, this article describes how to diagnose & fix the trouble. InspectAPedia tolerates no conflicts of.
