

PBT recycled material for optical cables

Overview

These materials are strategically employed to fortify and shield the delicate optical fibers within the cable. Polybutylene terephthalate (PBT) is a highly crystalline engineering plastic. It has excellent processability, stable size, good surface finish, excellent heat resistance, aging resistance and chemical corrosion resistance, so it is extremely versatile. In the communication optical cable industry. Optical cables, also known as fiber optic cables, are crucial on modern telecommunications. PBT's. When selecting PBT (Polybutylene Terephthalate) material suitable for optical cable loose tubes, it is necessary to comprehensively consider the material's mechanical properties, thermal stability, processing performance, environmental adaptability, and compatibility with optical fiber gel. Our unreinforced Pocan ® grades are suitable for a wide range of demanding applications because of their outstanding material properties. 4 part of 2,4-imidazolidinedione, 2-4 parts of polydicyclopentadiene, 2-3 parts of glycidyl tertcarbonate.
