

# Polarization Conversion Fiber Optic Patch Cord

## Overview

This high-performance Polarization Maintaining (PM) Fiber Patch Cord is engineered for precision-critical optical systems. Using Panda-type PM fibers and carefully aligned connectors, it ensures stable signal integrity even under rigorous environmental changes. Typical extinction ratios between 18 – 25dB maintain input. Patch cord polarity defines the directional optical path between two transceivers, ensuring that the transmit (Tx) signal from one device reaches the receive (Rx) port of the other. The PM axis orientation is maintained by using male connectors with a positioning key and a bulkhead female receptacle with a tightly toleranced keyway, ensuring good repeatability in extinction. SQS manufactures high-quality Polarization-Maintaining (PM) Single Mode Fiber Optic Patch Cords with consistently high extinction ratios (ER). We offer a wide range of connector types, including FC, SC, LC, MTP, and E2000, as well as AR-coated variants. All patch cords are produced and individually. There are four different 12/24 Fibers MTP/MPO cassette modules: Type A, AF(Pair Flipped), B1 and B2. Array polarity systems another device.
