

Precautions for using micro-module computer rooms

Overview

Electrocution Faulty wiring or wet hands can cause electric shocks, so equipment should be regularly inspected, and insulated cables should be used. Fire Overloaded sockets or overheating equipment may start a fire, so it's important to avoid overloading sockets and turn off unused. Working in a computer room can involve special fire protection issues; electrical, ventilation, security, and work practice issues also apply. Computer rooms (or “data centers”) have an increased risk of fire, because of the electrical energy used to run the machines, the heat generated by. The research leading to these results has received funding from the European Community's Seventh Framework Programme (FP7/2007-2013) under grant agreement n° 238875, relating to the project 'Multi-Gigabit European Research and Education Network and Associated Services (GN3)'. This document provides. Computer room location is affected by several factors, such as considerations for safety and fire prevention.
