

Relay Protection Receipt Number

Overview

When one device performs several protective functions, it is typically denoted "11" by the standard as a "Multifunction Device", but ANSI Device Numbers are still used in documentation like single-line diagrams or schematics to indicate which specific functions are performed by that device. Overview In and, ANSI Device Numbers can be used to identify equipment and devices in a system such as,, or. The device numbers are enumerate. • 1 - Master Element • 2 - Time-delay Starting or Closing Relay • 3 - Checking or Interlocking Relay, complete Sequence • 4 - Master Protective. A suffix letter or number may be used with the device number; for example, suffix N is used if the device is connected to a Neutral wire (example: 59N in a relay is used for protection against Neutral Displacement); and suffixe.
