

Relay protection panel test terminals

Overview

It is designed for on-load testing of relays and meters without disturbing panel wiring. The housing consists of ten pairs of silver plated contacts. Test blocks enable test technicians to quickly and safely isolate protection relays so that test signals may be injected and system. Test switches are designed and manufactured to allow quick and easy multi-circuit testing of switchboard relays, meters and instruments by any conventional system. These test switches and related test plugs have the features necessary for applications involving the measurement of individual. Relay Test Block is moulded out of high grade phenolic resin (Bakelite). Each pair is spring loaded, made out of phosphor bronze strips and separated. designed as a general-purpose isolation and test signal injection point. Where up to 14 test circuit 4M422 connects the live side circuits to the 4mm yellow test sockets. The. The MTS-5100 is the most powerful all-in-one relay test system with a direct front panel interface for all functions, without exception! The ideal system for testing and calibrating protective relays using traditional test techniques or applying realistic power system simulations.
